

Axiom Project Manager Millennium Release and OS/400 V5R1M0

If you have installed IBM's OS/400 V5R1M0 or intend on installing it, then please read this document first.

V5R1M0 has a feature that allows the Library List to be expanded to 250 entries instead of the normal default 25 entries.

If you enable this feature in V5R1M0 then you must do the following BEFORE anyone tries to even log on to Axiom:

Sign on as QPGMR, or a user in that group.

There is a source file in AXIOMMIL library named QCLSRC_V5.

You must compile all of the objects in QCLSRC_V5 into library AXIOMPM and replace the existing objects.

Your Axiom Project Manager internal Library List will still be limited to only 25 libraries. The changes enable Axiom to retrieve, save, manipulate, and restore your new expanded Library List within its control programs.

These new programs will work with both 25 and 250 Library Lists in V5R1M0, V5R2M0 or V5R3M0.

Axiom Project Manager Release 14.0 and OS/400 V5R1M0 or higher

If you have installed IBM's OS/400 V5R1M0 (or higher) or intend on installing it, then be aware that Axiom Release 14.0 is compatible with all V5 releases.
